Fluminense.; 3 University of Minnesota; 4 Institut de Recherche pour le Développement.

## South America Monsoon system (SAMS)

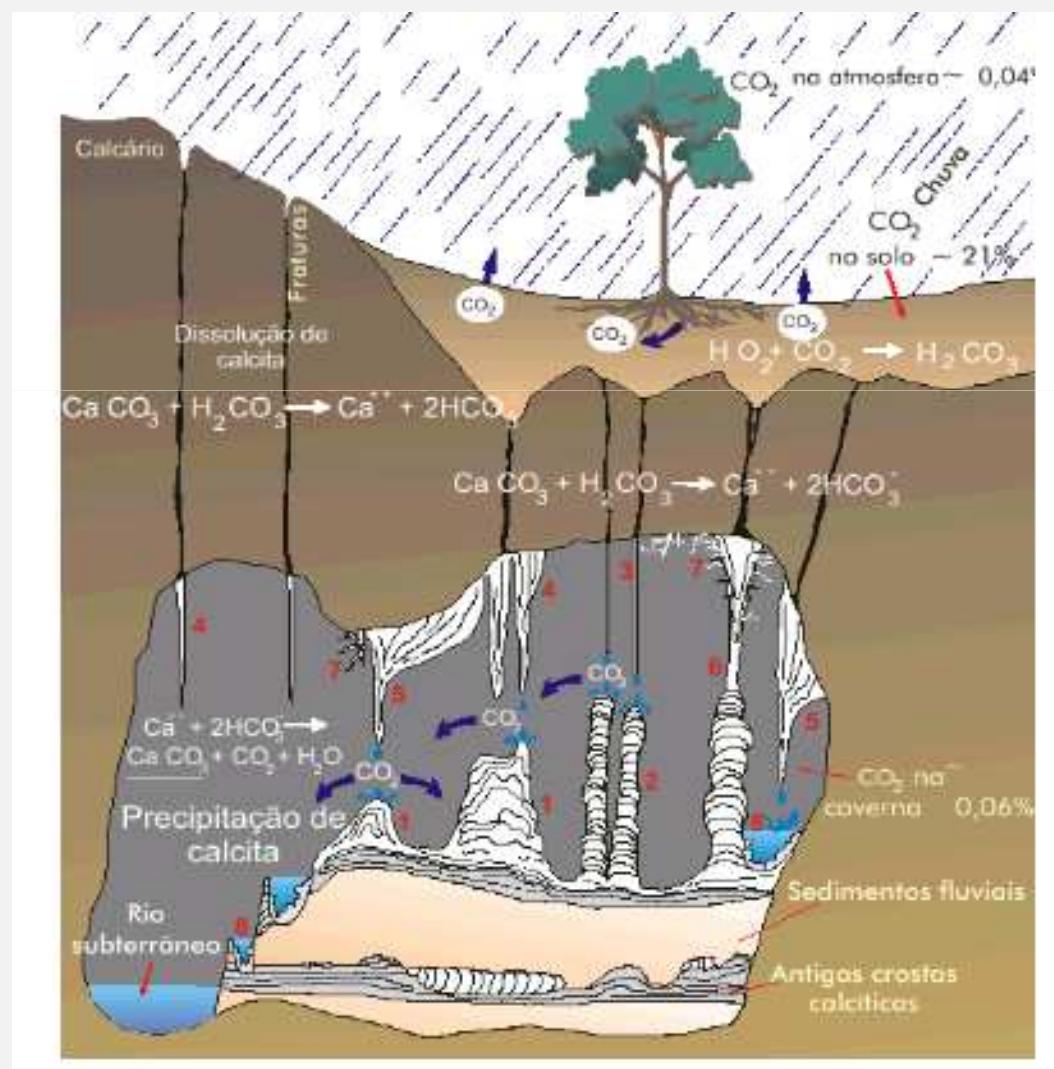

Long-term mean (A.D. 1979–2000) precipitation (in mm) for December–February (DJF) from the Climate Prediction Center Merged Analysis of Precipitation.

## Some records of SAMS for the last 2000 years

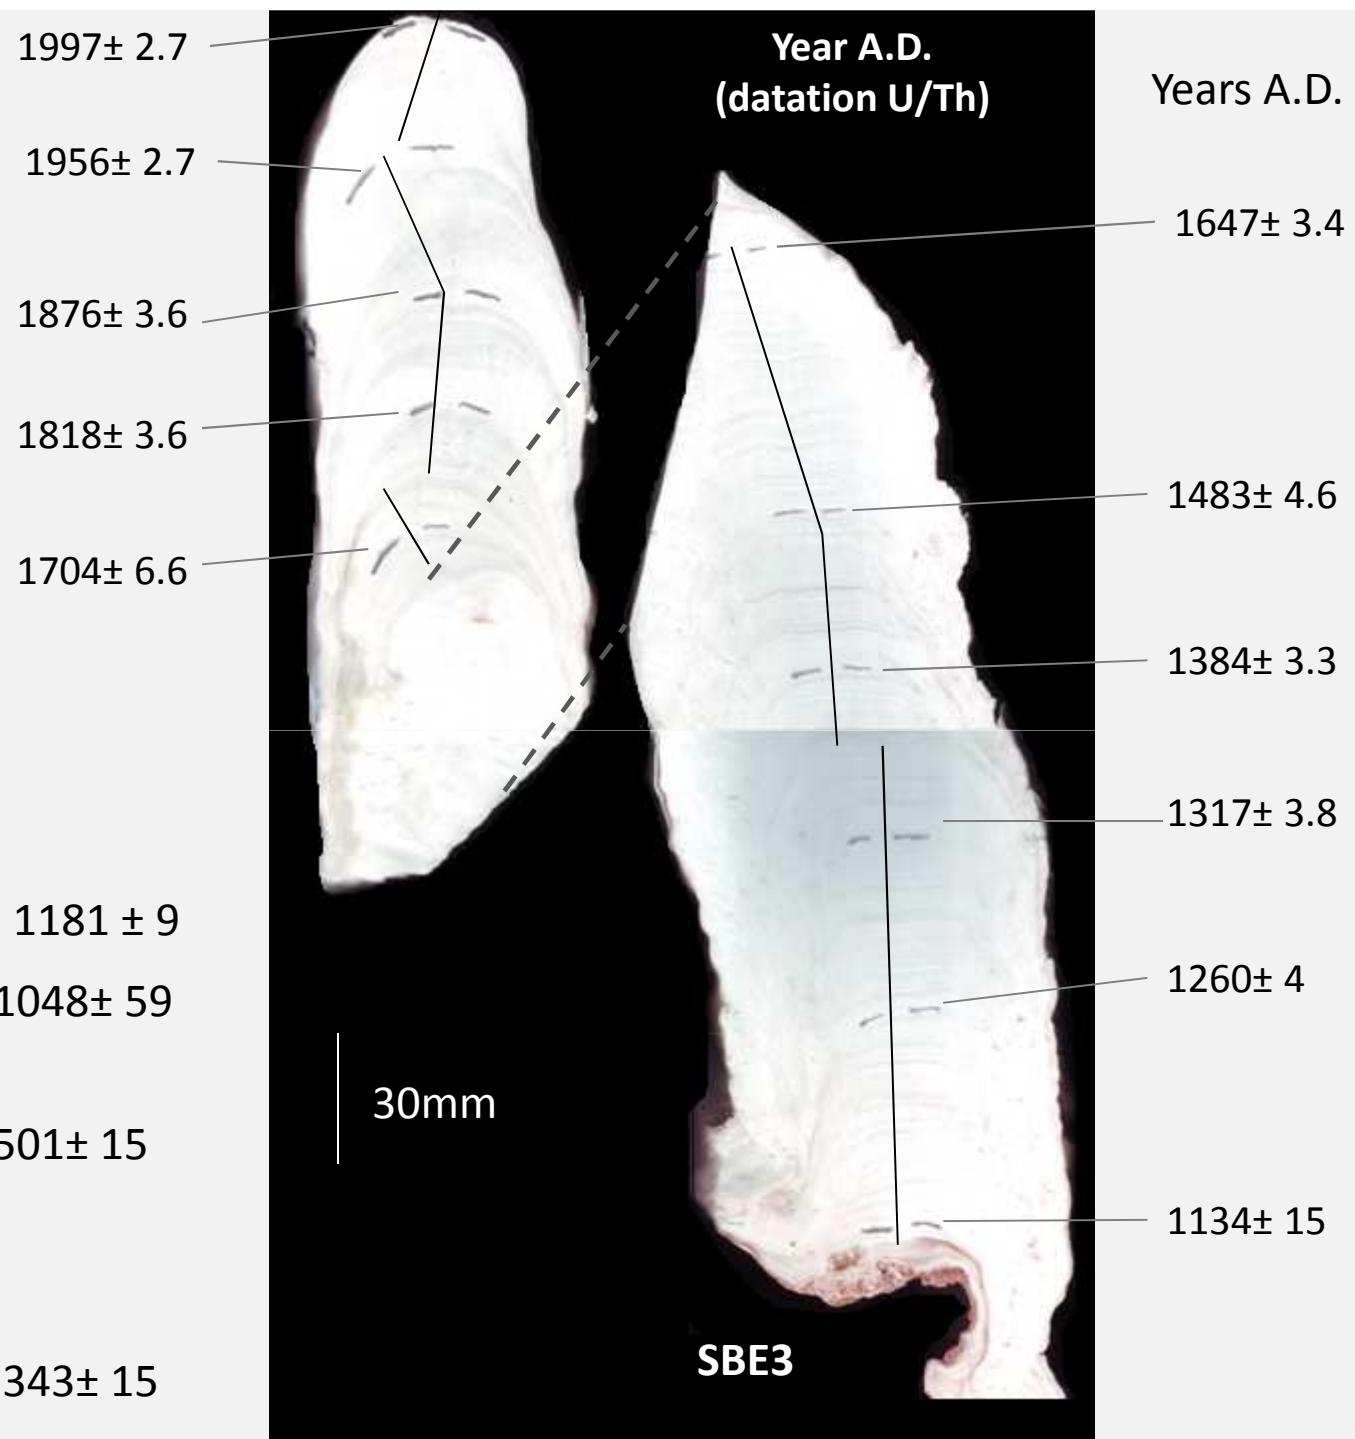

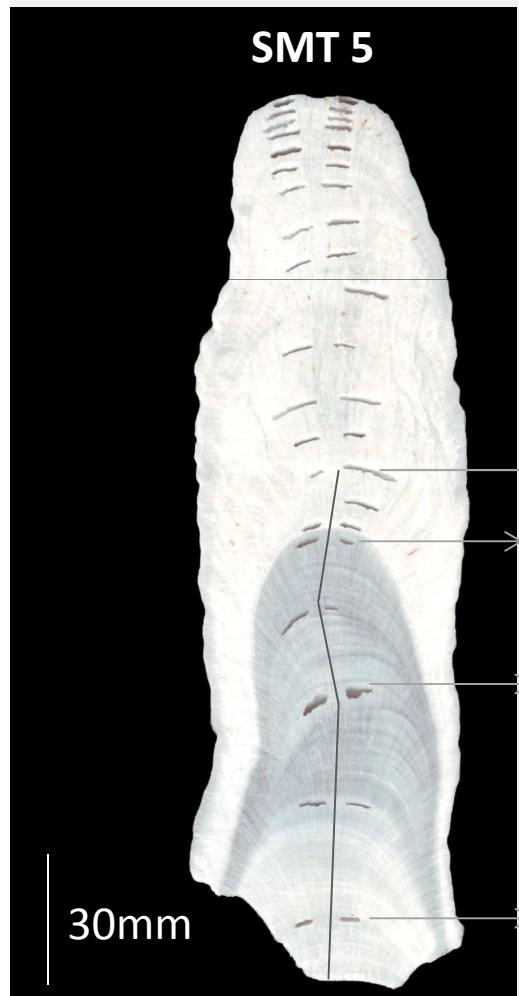

**Study area :**  
northern Goias state  
Terra Ronca park  
Upper part of Tocantins basin

## Espeleothems as indicador of paleoclimate and paleo-environment

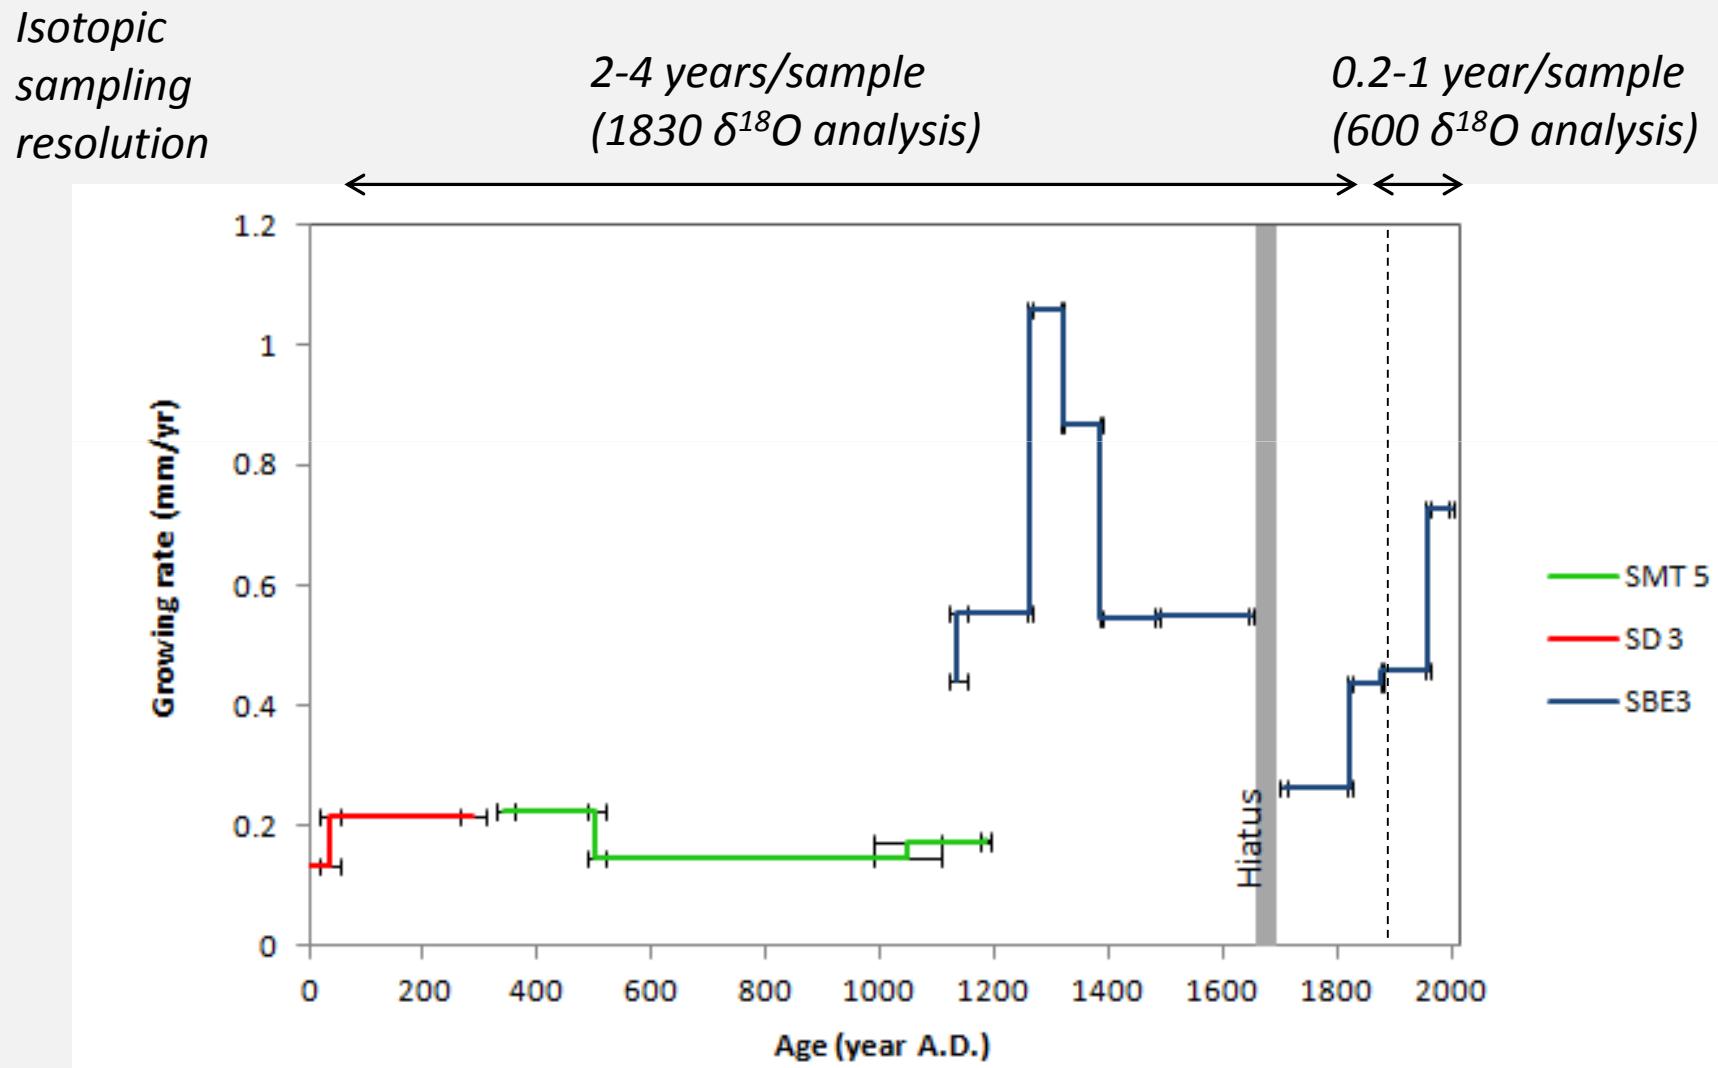

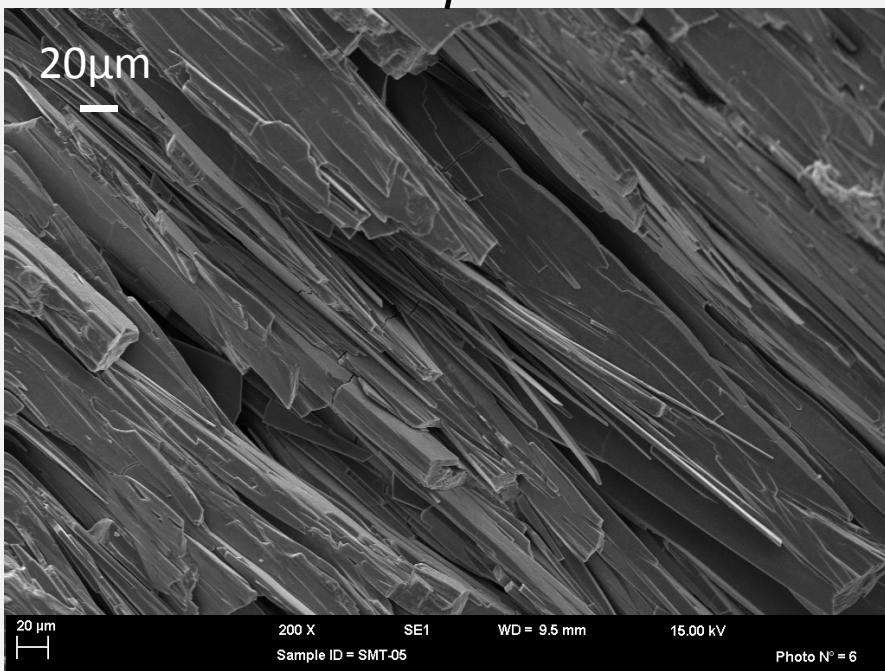

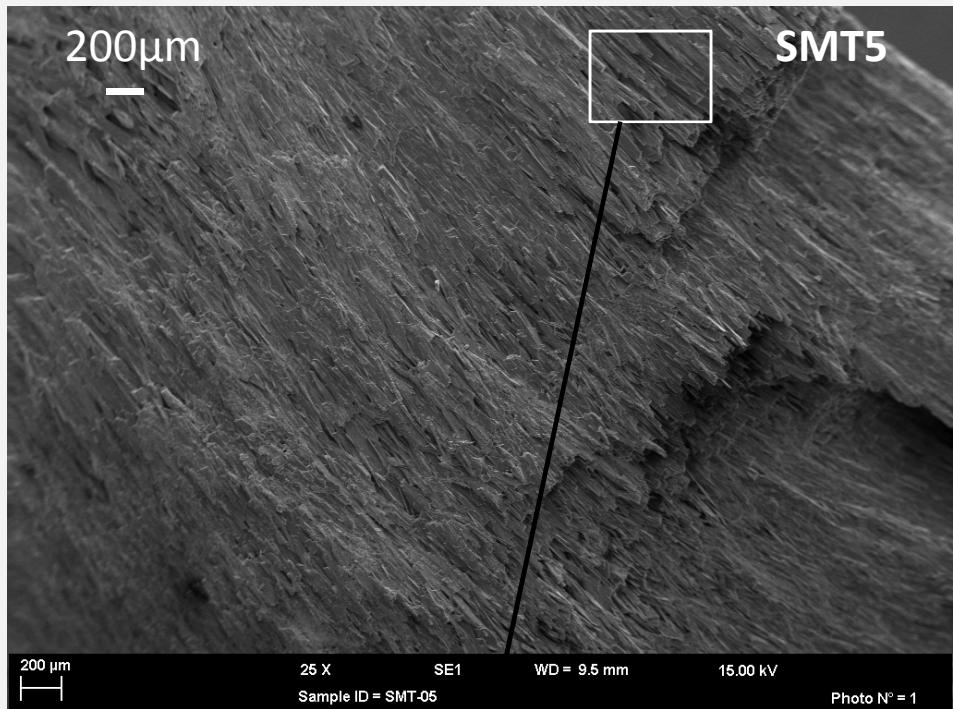

**3 stalagmites  
studied**

**17 U/Th dates  
2430  $\delta^{18}\text{O}$  analysis**

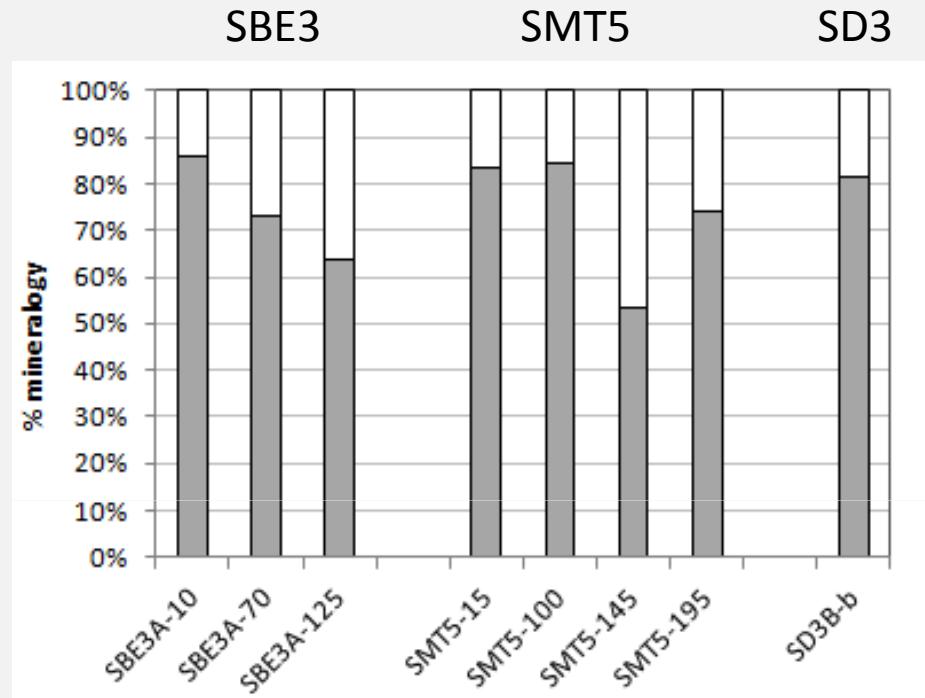

## Growing rate and isotopic sampling characteristics

SMT5

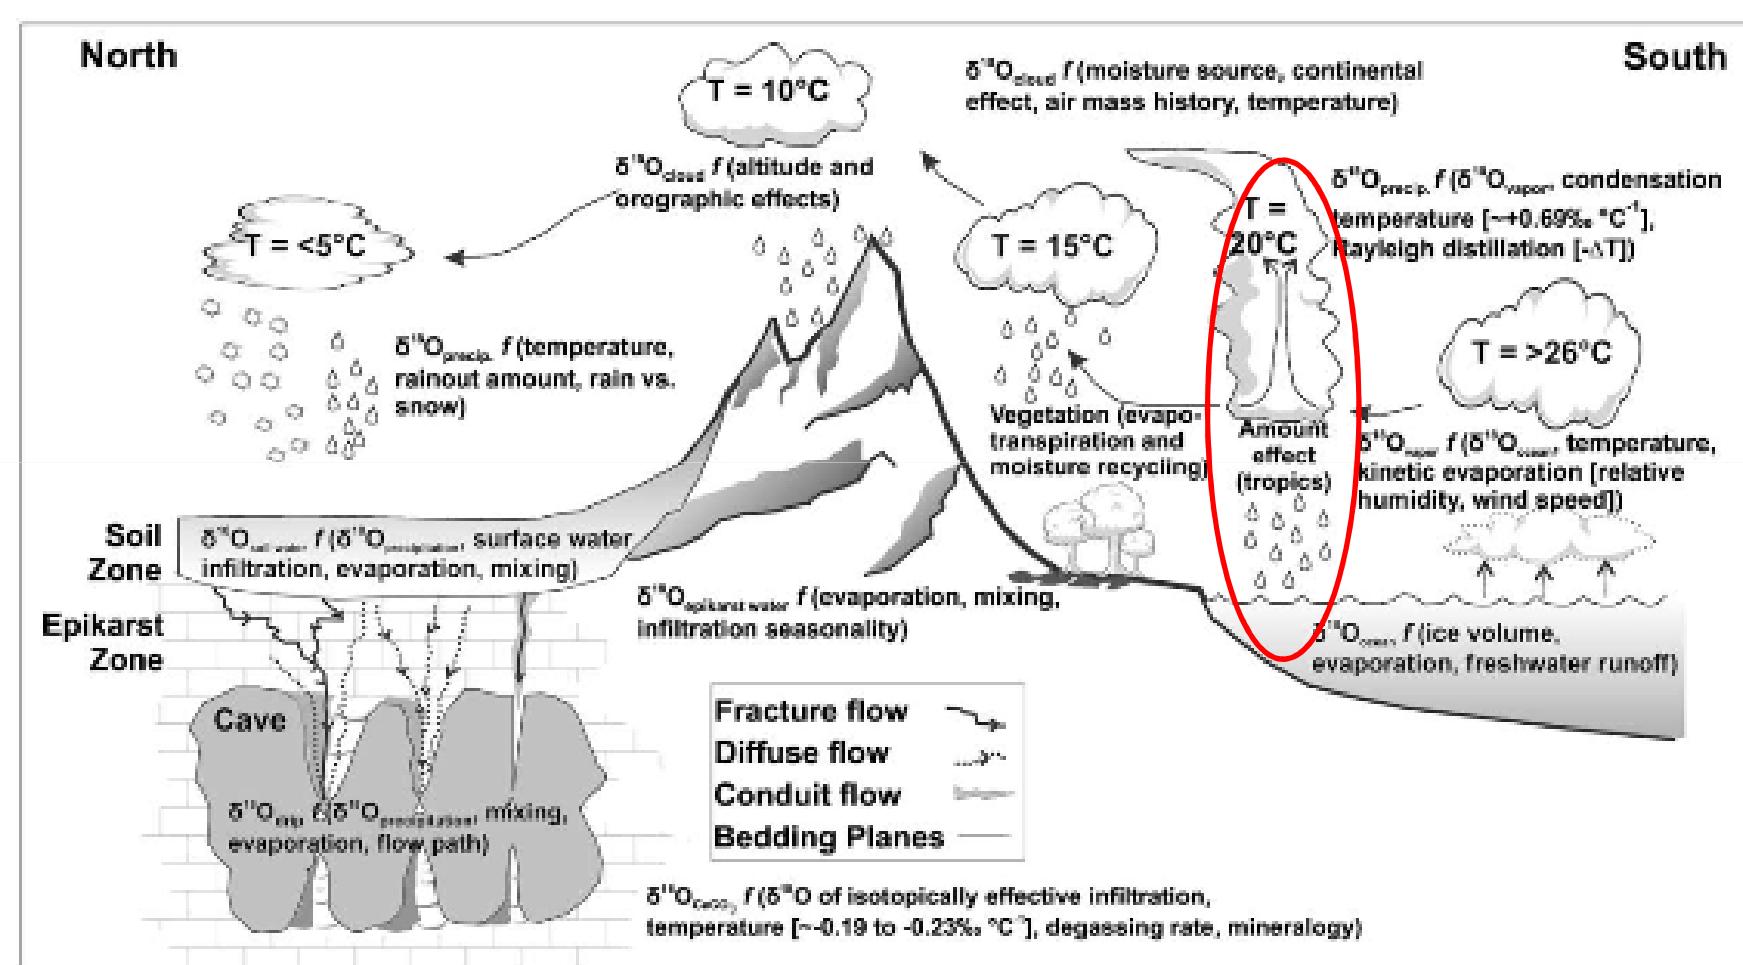

## Mineralogy

□ Calcite  
■ Aragonite

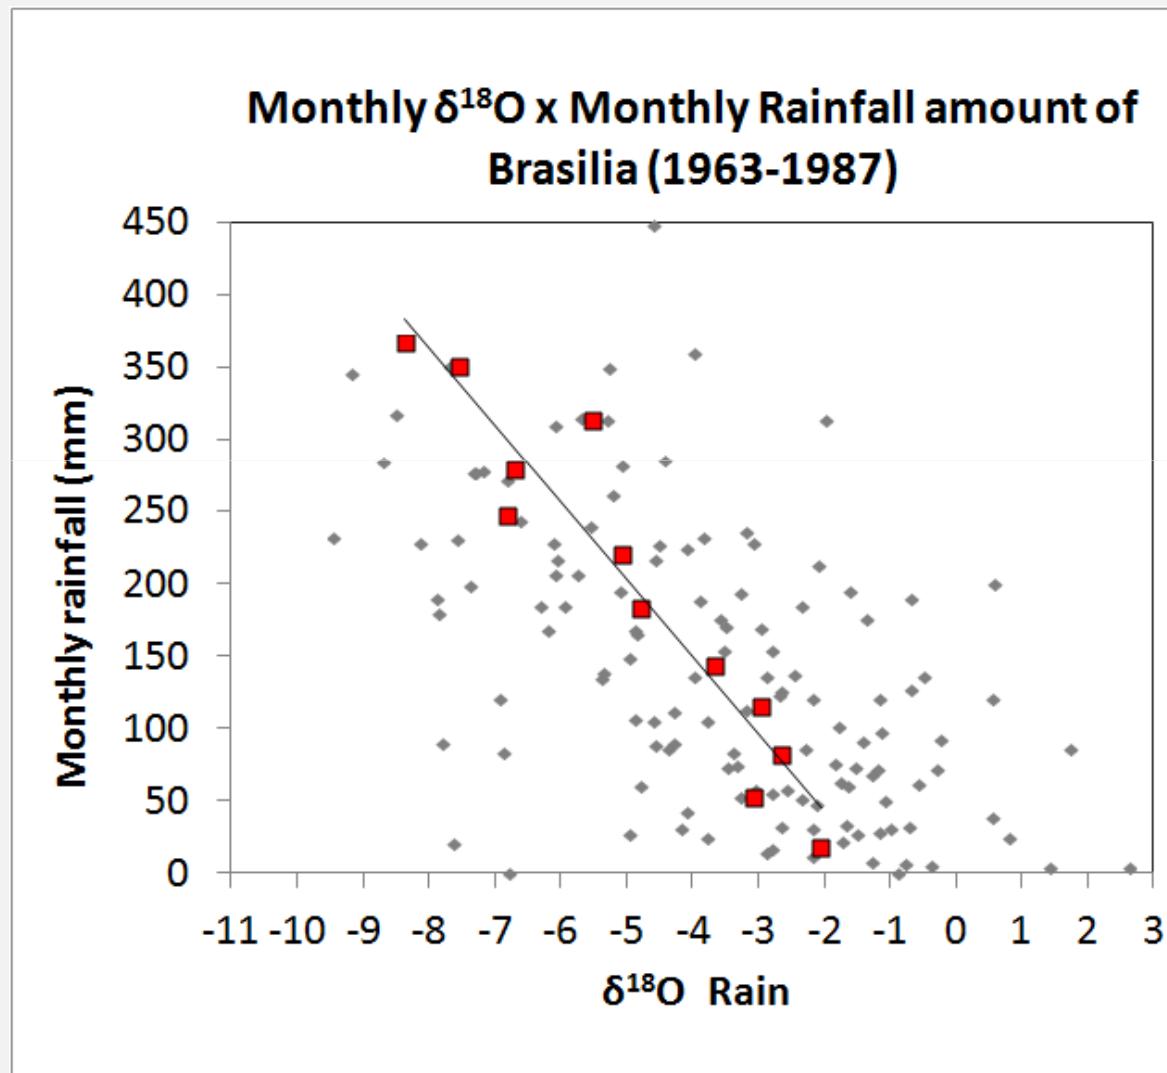

SEM images

## Control of the $\delta^{18}\text{O}$ carbonate signature

Lachniet et al., 2009

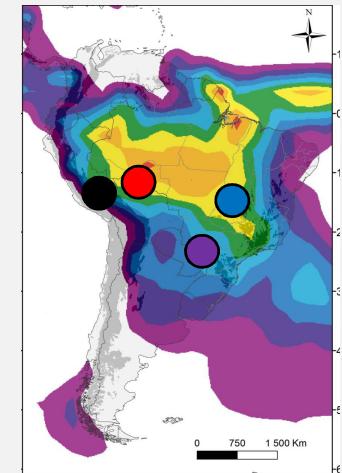

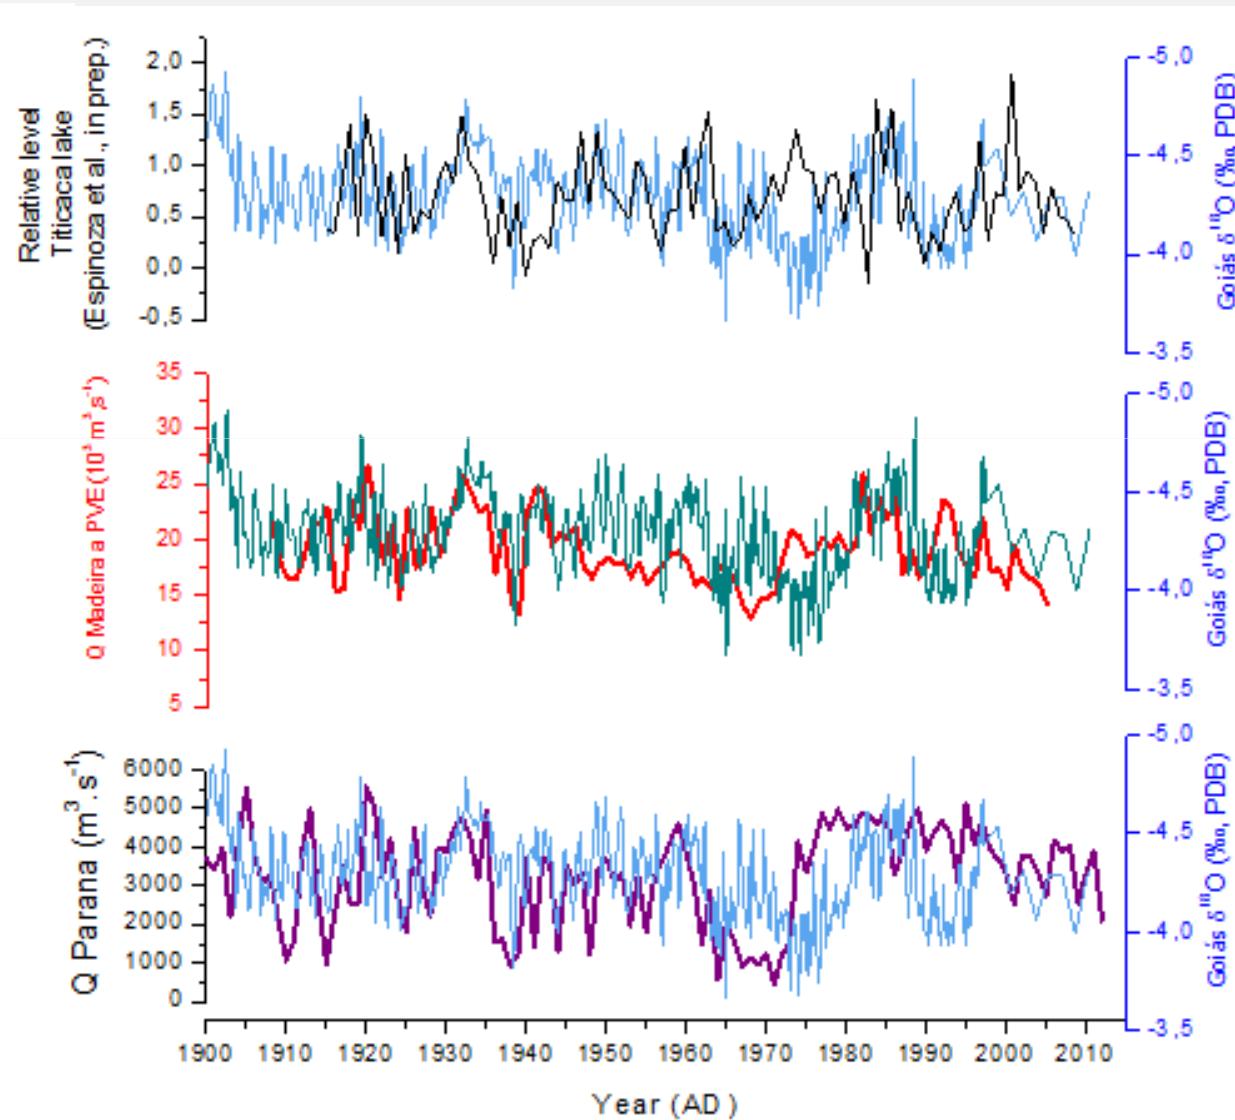

Rain  $\delta^{18}\text{O}$  signature = amount effect

From IAEA database

## Carbonate $\delta^{18}\text{O}$ signature = amount effect

$\delta^{18}\text{O}$  espeleotem Goias vs historical hydroclimatological records

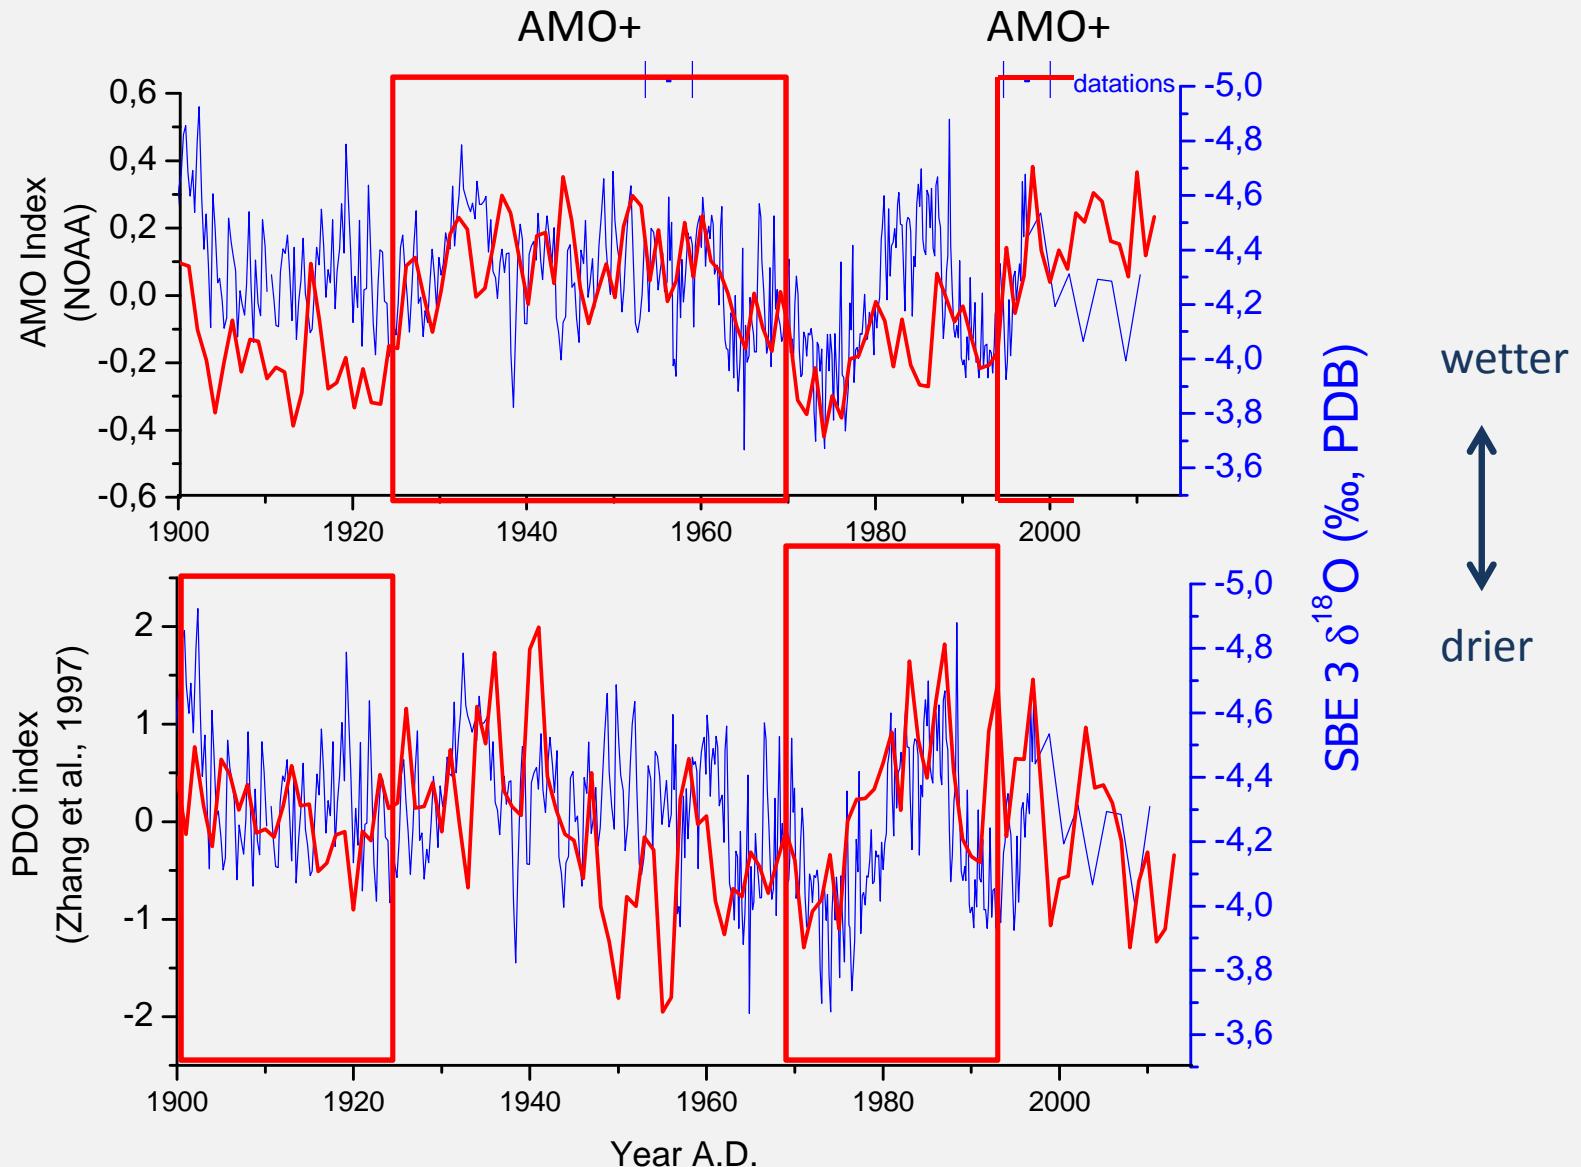

wetter

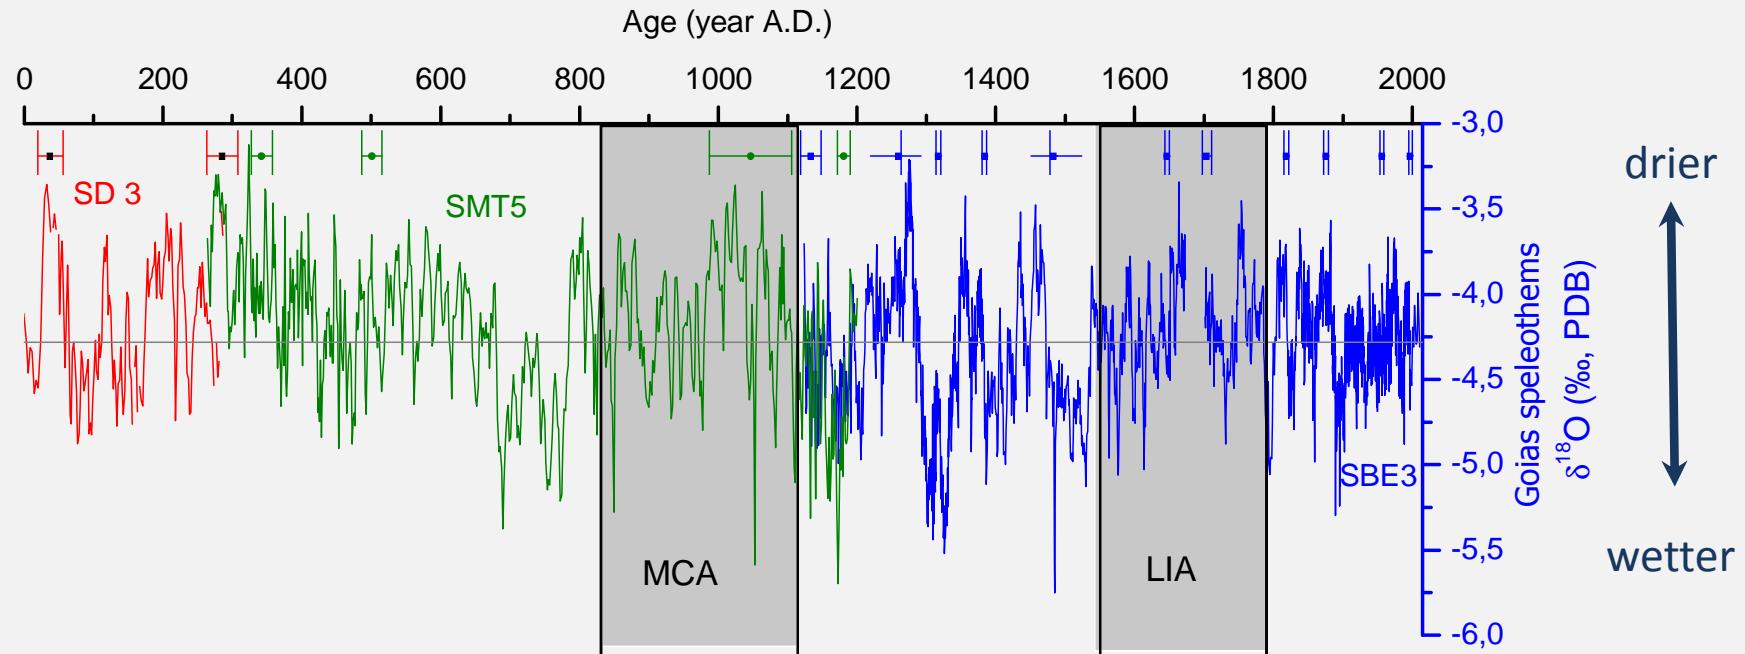

# Atlantic

# Pacific

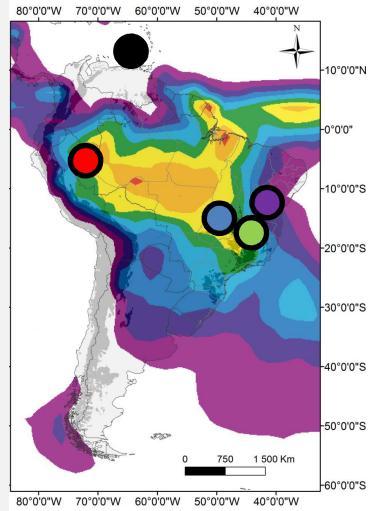

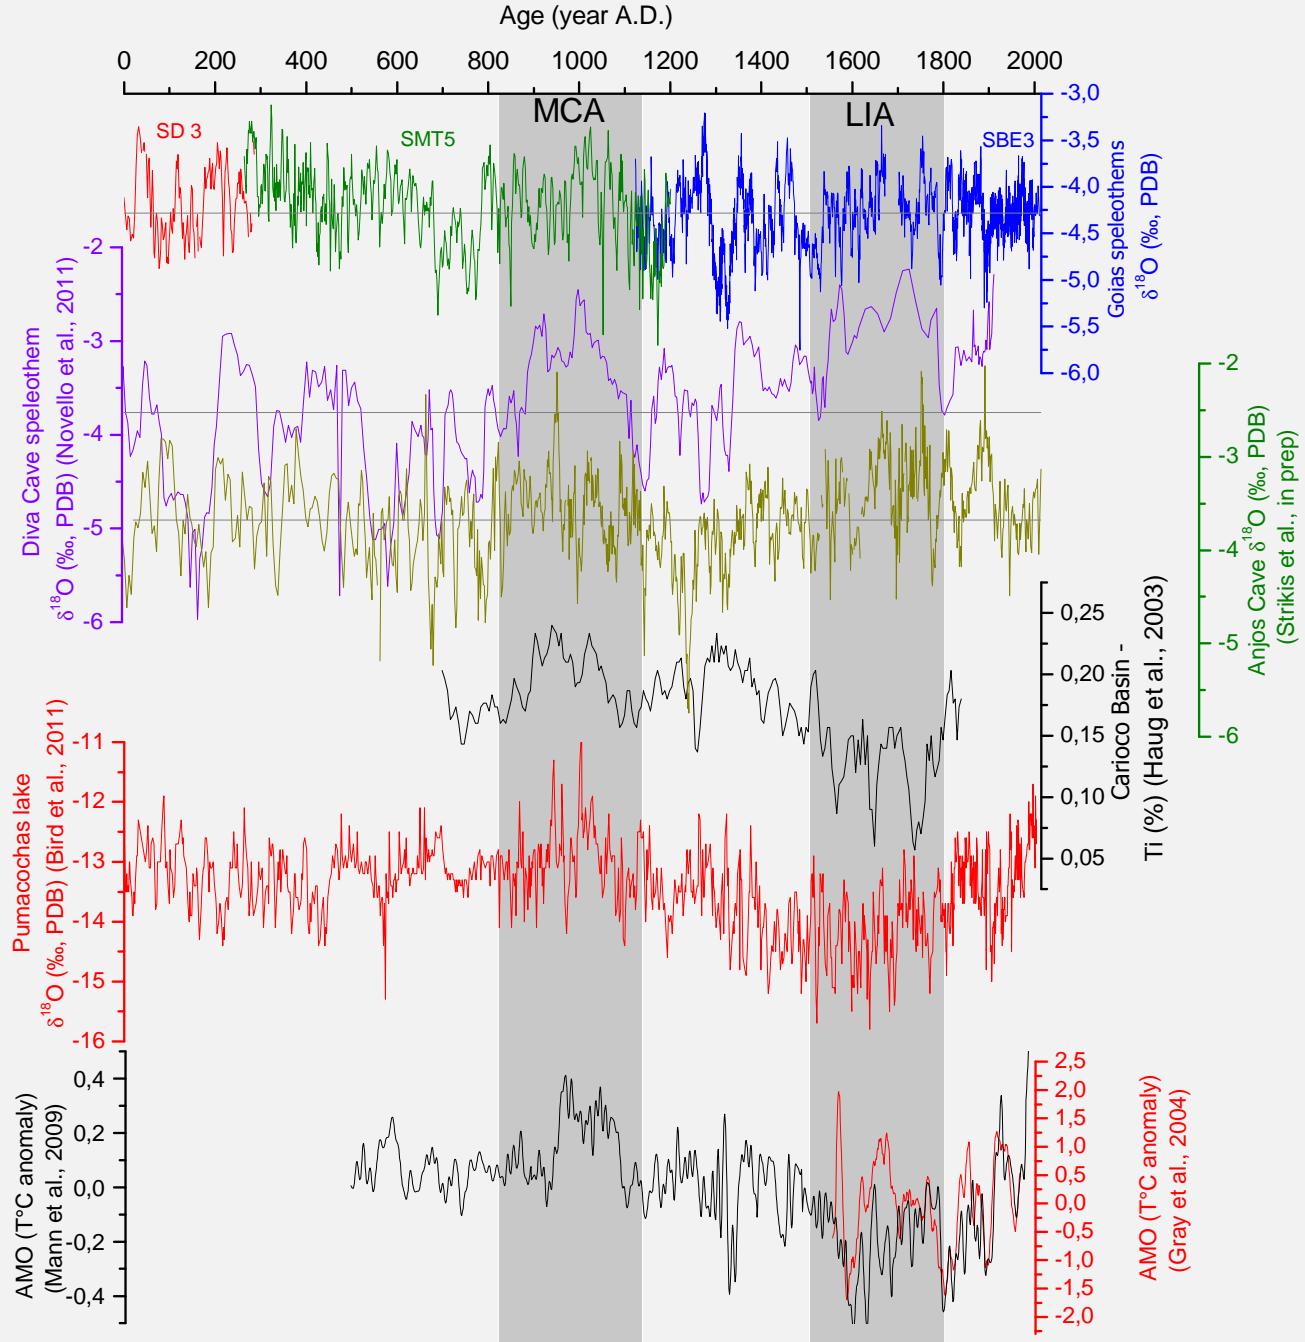

## Multidecadal variation of Northern Goias Climate during the last century

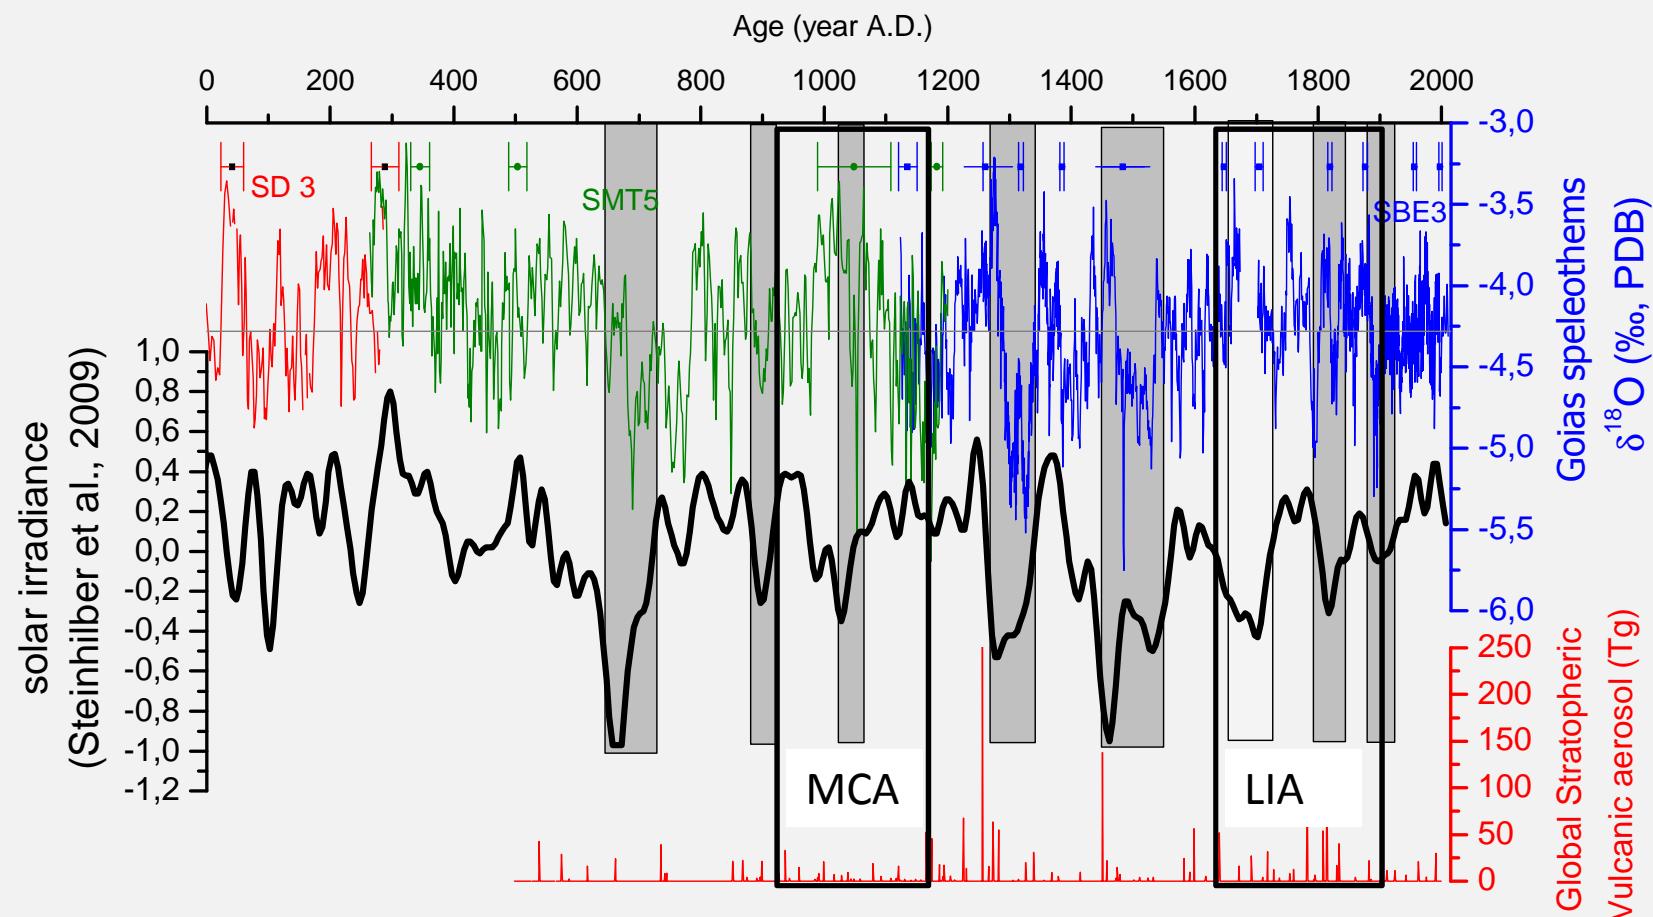

## Results : Rainfall variability of central Brazil during the last 2000 years

## Results : Comparision with some south-American records

## The solar activity and the volcanics evnts a forcant for wetter events?

## Conclusion

- Central Brazil climate depend on Atlantic and Pacific SST oscillations
- LIA : antiphase between central/eastern Brazil and the rest of the SAMS region on the last 2000 years  
(East/West displacement of the SACZ?)
- Solar activity seems to play an important role on SAM modulation on secular timescale

A close-up photograph of a sea urchin's surface, showing numerous long, thin, light-colored spines radiating outwards from a textured, yellowish-brown body. Some small water droplets are visible on the spines.
